

AMENDMENTS

In the Claims:

Please amend claims 1, 3 and 5 as follows.

1. (Amended) A method for detecting target objects using a radar device, comprising:
arranging at least three transmitting and receiving devices for radar beams such that their
beam fields form a detection area of the radar device;

C1 a successively activating and deactivating the at least three transmitting and receiving
b devices such that at least two adjacent transmitting and receiving devices are operated
simultaneously; and

evaluating echo signals from the transmitting and receiving devices using monopulse
radar.

C2 3. (Amended) The method as claimed in claim 1, wherein at least one of the deactivated
transmitting and receiving devices is reactivated for activation of the at least three transmitting
and receiving devices.

C3 5. (Amended) The method as claimed in claim 3, wherein the position angle of the
target object relative to the radar device is determined by comparison of beam intensities of the
at least three transmitting and receiving devices.
